## ICO SPA V2

### ICO SPA and it all becomes crystal-clear.

ICO SPA is a connected water analyser that monitors the quality of your spa water. It measures pH, ORP and water temperature once an hour. For salt spas, ICO SPA also analyses TDS. Thanks to its algorithms, ICO SPA anticipates changes in the water and makes personalized recommendations on the dosage of treatment products and the maintenance of your spa. This directly on your mobile app, and only when necessary.

ICO is fast becoming an essential tool for keeping track of changes in the quality of your spa water and taking the right steps to maintain it, simply and easily.

### ICO POOL V2 features

- Water quality monitoring device for spas (also available for pools).
- Compatible with Chlorine & Bromine sanitizers and with Saltwater Chlorinator systems, depending on the model.
- Measurements every hour, 24/7: temperature, pH, sanitizer (ORP Redox), TDS or Salt concentration (conductivity).
- ICO Water Index, a synthetic 360° overview on water quality, balance between disinfection and comfort, thanks to its colour code.
- Dashboard: values of the last measurements and trends
- Graphs with detailed views by day, week or month, with averages, minimum and maximum thresholds.
- Customised recommendations based on the volume and type of disinfection of your pool and the treatment products used.
- Notifications & alerts. Personalized settings.
- Multiple pools overview: Carousel for quick and easy navigation between several pools and spas monitored by a user.
- Sharing: allow friends & family – or a servicing company – to have visibility on ICO data & recommendations while you're away or on holiday.
- Plug & Play sensors: removable and replaceable probes.
- ICO Mobile Application, free download on Play Store (Android) or Apple Store (iOS).

**ICO Pool V2 technical specifications**
